What is most important to you in a short course/tutorial? 0 Cutting-edge theory **209** Practical applications

What did you consider most effective about this short course / tutorial?

- Nice review of regression technique
- Examples & Handouts
- Combination of cutting edge methods with software to implement, comprehensive theory for modeling/strategy, excellent presentation and links on web.
- Nice mix of theory and practice
- Very informative, Dr. Harrell did a good job of discussin theory in practice, very interesting
- The presenter covered a lot of territory today – it was very comprehensive, even if parts of the lecture were sparse on some topics
- Outstanding presentation by an accomplished presenter. Very nice set of notes provided for this short course with a great bibliography

What did you consider least effective about this short course / tutorial?

- Case studies could use more time. Would be great to have a separate class devoted solely to survival model-building.
- Presenter's voice was very monotone, needed more short examples, handout needed better organization
- Would be nice to blend in the case studies a little earlier in the session
- The notes and lecture weren't always straight forward – I would have liked if the instructor made the take home message more obvious / bold sometimes
